

NULLCLOUD ACCESSIBILITY STATEMENT

NullCloud is committed to making our website and services accessible to as many people as possible. Infrastructure should be usable by the people who operated it, including customers which use screen readers, keyboard navigation, magnification, high-contrast settings, reduced-motion preferences, or other assistive technologies.

This statement explains the accessibility standard we work towards, what we have implemented, where limitations remain, and how to report an accessibility problem.

Our Commitment

We are working to make nullcloud.co.uk and the NullCloud control panels usable by people with disabilities.

Accessibility is part of our ongoing product development rather than something we intend to address only during major redesigns. Accessibility issues are treated as product defects: they are reported, prioritised, and addressed according to their impact.

We aim to ensure that customers can perform essential tasks like:

- Purchasing and managing servers
- Viewing server statuses and resource usage
- Accessing configuration options
- Viewing invoices and payment
- Managing your account and billing information

Accessibility Standard

We target Web Content Accessibility Guidelines (WCAG) 2.1 Level AA for our public website and customer facing interfaces.

Where appropriate, we also incorporate WCAG 2.2 Level AA success criteria as our interfaces are developed and updated.

We do not claim we are fully conformant with every WCAG criterion at all times. Our services are constantly changing, and automated accessibility testing can not identify every single barrier.

This statement therefore represents our current position rather than a certification or guarantee of full conformance with WCAG.

Current Accessibility

We are continuing to improve accessibility across the NullCloud platform.

Our accessibility work includes:

- Semantic HTML and meaningful page structures;
- Logical heading hierarchies;
- Keyboard-accessible navigation and controls;
- Visible keyboard focus indicators;
- Descriptive names for links/buttons;
- Accessible form labels and validation messages;
- Responsive layouts

Some areas of the control panels, particularly complex interfaces such as consoles, resource graphs, dynamic notifications & certain workflows may need additional accessibility work.

We're actively working to improve these areas.

Tell us what's broken

If you encounter an accessibility barrier anywhere on our website or panels, please contact us at:

support@nullcloud.co.uk and devops@nullcloud.co.uk

Please tell us what page you were using, what you were trying to do, what browser, OS, or assistive technology.

Any detail which helps us recreate the problem is useful.

We will review accessibility reports and work to resolve accessibility issues as part of our normal process.
